## ACCESS CONTROL AND VIP MANAGEMENT

ISM Access Access Control and VIP Management enable organizations to manage access to sensitive areas and enhance the VIP experiences through AI visual identification. Our patent-pending facial recognition products are designed to be scalable, fast, and accurate while maintaining the highest levels of security, privacy, and convenience.

### KNOW WHO TO EXPECT BENEFITS OF ACCESS

Access delivers a next-generation access solution based on visual identification of individuals from approved lists, enabling touchless entry for authorized individuals and denial of entry for anyone not recognized by the system.

This technology can also be used to create customized alerts sent to staff when specific individuals arrive at the venue, which may include key details and preferences of each VIP.

## IMPLEMENTATION

### Cameras

2MP, 25 FPS minimum requirement

### Access Panels

Integrated with most major providers. Digital or Wiegand based systems.

### Computing

On-premise and Cloud-only solutions

### Dashboards

Web-based desktop version for control rooms. iOS and Android mobile apps empower all onsite personnel.

## KEY FEATURES

Secure and scalable registration of entrants

Easily integrates with existing hardware

Real-time, computer vision decision making

Mobile Alerts to software teams
